

Teachers, School Officials, Guidance Counselors:

We need your help to get the word out to your students about our program!

The **ACE Mentor Program** was developed to motivate high school students to enter the fields of Architecture, Construction, and Engineering. This program is free to students, 9th to 12th grades who become eligible to apply for an ACE scholarship upon completion. We would like to have you forward on or pass out information about our program. In addition, if you have interest, we will come in to speak to your class or groups. Educators in more than 106 communities and 1,100 high schools across the U.S. have seen the difference ACE can make in their students' academic performance, college aspirations and career motivation.

No school time is used; no school funds are needed. Students meet in the early evening, bi-weekly, October through April, with dedicated mentors who guide them through engaging, hands-on projects and field trips. These activities reinforce classroom learning in math, physics, art, computer skills and other important subjects, establishing for students a direct link between curricular and career success.

ACE mentors frequently provide qualified students with recommendations for college admissions, internships, and full-time employment. ACE has also forged relationships with 44 colleges and universities nationwide that value what we impart to students and factor it into the admissions process.

We have close to fifty (50) local industry professionals that are ready and willing to work with the students. We have many local firms willing to offer their conference rooms to house the program. We will have close to eighty (80) openings for students for the 2013/2014 school year! Students need to apply online between August 10, 2013 and September 10, 2013.

I ask you, who will design and build our future buildings?
