ACE Mentor Program, Houston, local affiliate of the national ACE Program is an after-school mentoring program giving teams of students the opportunity to work closely with architects, construction managers, and engineers. Over the course of a school year from October through April, mentors show students how designers and builders think and work while students learn about career opportunities in their respective fields.

Students meet at one of eight locations around the Houston area. Each location follows a similar curriculum and at the conclusion of the program students groups from all locations compete at the final student competition in early April.

Contact the Lead mentor listed above to learn more on each location.
